

WHAT IS CLAIMED IS:

425  
5A 1. A method for rendering a trimmed ribbon image on a display device of a computer, comprising the steps of:

inputting content ready to be displayed on a trimmed ribbon object;

generating a ribbon route for the trimmed ribbon object by a wrap function;

10 cutting the ribbon route of the trimmed ribbon object into a plurality of sub-paths by a plurality of cutting points on the ribbon route;

generating a plurality of segments by separately applying an effect function to the sub-paths and the content attached to the sub-paths; and

15 combining the segments to produce the trimmed ribbon image.

20 2. The method of claim 1, wherein slope values of tangent lines passing through the cutting points are a local maximum value or a local minimum value.

3. The method of claim 1, wherein the content is a string with a plurality of letters.

25 4. The method of claim 3, wherein in the cutting step the letter is divided into two parts by generating two trajectories of a contour of the letter when the cutting points cutting across an interior of the letter.

5. The method of claim 1, wherein the effect function is shading.

6. A computer readable medium for storing a program,  
5 comprising the commands of:

inputting content that is ready to be displayed on a trimmed ribbon object;

generating a ribbon route of the trimmed ribbon object by a wrap function;

10 cutting the ribbon route of the trimmed ribbon object into a plurality of sub-paths by a plurality of cutting points on the ribbon route;

generating a plurality of segments by separatively applying an effect function to the sub-paths and the content  
15 attached to the sub-paths; and

combining the segments to produce the trimmed ribbon image.

7. The computer readable medium of claim 6, wherein  
20 slope values of tangent lines passing through the cutting points are a local maximum value or a local minimum value.

8. The computer readable medium of claim 6, wherein the content is a string with a plurality of letters.

25 9. The computer readable medium of claim 8, wherein in the cutting command the letter is divided into two parts by generating two trajectories of a contour of the letter when the cutting points cut across an interior of the letter.
